The Bedlington Terrier Health Group.

To: My Veterinary Surgeon.

Please keep a copy of this form with my dog's records.
Dr Susan Haywood is continuing her research in to copper storage disease in Bedlington Terriers. She urgently requires samples of liver tissue to correlate histopathalogical changes, with the liver, with DNA research.

In the event of the death of my Bedlington Terrier, I wish liver samples to be removed for research purposes and an email to be sent to – shaywood@tiscali.co.uk

The samples are to be sent to:

Mr J Trafford (for S Haywood Gene Project)
Department of Veterinary Pathology,
Faculty of Veterinary Science,
University of Liverpool,
Liverpool.
L69 7ZJ

The samples required.

1. **1 – 2 g. of liver in 10% formalin**
2. **1 – 2 g. of fresh liver**
3. **1 – 2 g. of liver placed in "RNA Later" solution which can be supplied by the University on request. (if this is possible).**
4. **2 – 3 ml. EDTA blood (if this is possible).**
